

[DM] Project Proposal

Group Members:

Name: Ahmed Yousry Mohamed Moussa Mohamed

Matricula: 2246600

Chosen Project Type: Data Warehouse (DW) project

Datasets:

1. TMDB Movies Dataset.
2. IMDB Movie Ratings Dataset.

These datasets contain information about movies such as titles, genres, release dates, user ratings and other metadata (budget, revenue, cast, and production details).

Work Description:

- Doing end-to-end data pipeline work starting from source systems to a data warehouse.
- Implementing an ETL process to extract data from different sources, transform it by cleaning, standardization, and handling missing, inconsistent, and invalid data values.
- Loading it into a data warehouse designed from scratch using a relational database (ROLAP).
- The data warehouse is designed using a dimensional (fact and dimension) model and implemented as a star schema.
- Providing efficient querying and analysis-ready data for reporting and BI use cases, supporting business-ready insights about movie metrics such as ratings, budgets, and revenue
